1. Overview

BA Toolkit is a Frappe/ERPNext app that gives business analysts a structured place to document their work — stakeholders, elicitation sessions, requirements, business rules, designs, and evaluations — instead of scattering it across Word files and spreadsheets.

Every artifact links back to a core ERPNext Project, so BA documentation lives next to the engagement it supports .

The app is organized around the six knowledge areas of the BABOK v3 guide, so the structure doubles as a working reference while you study toward ECBA / CBAP.

2. The Workflow

The diagram below shows the typical path through the app, from planning an engagement to evaluating the delivered solution. The change request loop is optional — use it whenever a requirement needs a tracked change after it has been approved.

3. Roles & Permissions

Two roles are created automatically when the app is installed:

Role	Can do	Typical assignee
Business Analyst	Create, read, edit all BA Toolkit records. Cannot delete.	BAs doing day-to-day documentation
Business Analyst Manager	Everything above, plus delete. Approves change requests and publishes documents.	BA lead / engagement manager

Assign these from User > Roles for each team member. System Manager always has full access regardless of these roles.

4. Step-by-Step Guide

This section walks through each stage of the workflow in the order you'll typically use it.

4.1 Plan & Stakeholders (Planning & Monitoring)

Start a new engagement with BA Approach — one record per project, capturing how you'll plan, govern, and manage information for that engagement. Tabs cover Planning, Stakeholder Engagement, Governance, and Information Management.

Then build the BA Stakeholder register for the project: name, role, organization, and a quick influence / interest / attitude rating for each person. This becomes the reference point for every elicitation session you plan.

4.2 Run Elicitation Activities (Elicitation & Collaboration)

Log each interview, workshop, or document review as a BA Elicitation Activity: technique used, date, facilitator, participants (pulled from your Stakeholder register), agenda, and key findings.

From an activity record, use the “New Requirement from this Session” button to spin up a requirement directly from session notes — the project and source activity are pre-filled.

4.3 Analyze Strategy (Strategy Analysis)

Capture the problem or opportunity in a BA Business Need. Then open a BA Strategy Analysis record to work through current state, capability gaps, future state, risks, and your recommended change strategy.

Risks you log in the Risks tab are automatically rated (Critical / High / Medium / Low) from likelihood × impact — no manual scoring needed.

4.4 Define Requirements (Requirements Life Cycle Management)

BA Requirement is the core artifact. Set its type (Business, Stakeholder, Solution-Functional, Solution-Non-Functional, or Transition) and a MoSCoW priority. Use the parent requirement field to decompose a large requirement into smaller ones — open Tree > BA Requirement for the full traceability tree.

If an approved requirement needs to change, use “New Change Request” from the requirement form. The change request tracks the description, justification, impact analysis, and decision — it doesn't edit the original requirement directly, so you keep a clean history.

4.5 Design the Solution (Requirements Analysis & Design Definition)

With requirements defined, add the supporting design detail wherever it's useful:

- BA Business Rule — constraints, computations, and action-enablers
- BA Use Case — actor, main flow steps, alternate flows
- BA User Story — As a / I want / So that, with story points
- BA Process Model — as-is / to-be narrative plus an attached BPMN or flowchart image
- BA Glossary Term — shared definitions, project-specific or organization-wide

Each links back to a BA Requirement via the “Related Requirement” field, so you can trace from a business rule all the way back to the need that drove it.

4.6 Compile the Document

BA Document pulls everything together into a BRD, FRD, Vision and Scope Document, or Business Case. Set the project and document type, then click “Pull Project Artifacts” — it bulk-loads every stakeholder, requirement, and business rule for that project into the document in three queries, ready to trim down to what belongs in this particular deliverable.

Use Print > BA Document - BRD to generate a formatted PDF with a cover section, executive summary, stakeholder table, requirements table, business rules, and a sign-off block.

4.7 Evaluate the Solution (Solution Evaluation)

After delivery, open a BA Solution Evaluation record and log performance measures — metric, target, and actual — alongside findings and recommendations. This closes the loop back to the business need you started with.

5. Quick Reference

All doctypes at a glance, grouped by knowledge area.

Planning & Monitoring

Doctype	Naming	Purpose
BA Approach	BA-APR-#####	Planning, governance, and information management approach per project
BA Stakeholder	BA-STK-#####	Stakeholder register with influence / interest / attitude

Elicitation & Collaboration

Doctype	Naming	Purpose
BA Elicitation Activity	BA-ELI-YYYY-#####	Interviews, workshops, and other elicitation sessions

Requirements Life Cycle Management

Doctype	Naming	Purpose
BA Requirement	BA-REQ-YYYY-#####	Core requirement record with tree-based traceability
BA Requirement Change Request	BA-CR-YYYY-#####	Tracked change to an existing requirement

Strategy Analysis

Doctype	Naming	Purpose
BA Business Need	BA-NEED-YYYY-#####	Problem or opportunity statement
BA Strategy Analysis	BA-STR-YYYY-#####	Current / future state, capability gaps, risks, change strategy

Requirements Analysis & Design Definition

Doctype	Naming	Purpose
BA Business Rule	BA-RULE-#####	Constraints, computations, action-enablers
BA Use Case	BA-UC-#####	Actor-driven main and alternate flows
BA User Story	BA-US-#####	As a / I want / So that, with acceptance criteria
BA Process Model	BA-PM-#####	As-is / to-be process narrative and diagram

Doctype	Naming	Purpose
BA Glossary Term	BA-GLOS-#####	Shared definitions and terminology

Solution Evaluation

Doctype	Naming	Purpose
BA Solution Evaluation	BA-EVAL-YYYY-#####	Post-implementation performance measures and findings

Cross-Cutting

Doctype	Naming	Purpose
BA Document	BA-DOC-YYYY-#####	Compiles a BRD / FRD / Vision & Scope / Business Case

6. Tips

1. Start every engagement with BA Approach and BA Stakeholder — everything else links back to the project and to people on that register.
2. Use the requirement tree (Tree > BA Requirement) to break large requirements into smaller, testable ones rather than writing one long description.
3. Raise a Change Request instead of editing an approved requirement directly — it keeps a clean audit trail of what changed and why.
4. Pull Project Artifacts on BA Document before every export, so the BRD always reflects the latest stakeholders, requirements, and rules.
5. Review BA Strategy Analysis risk ratings before sign-off — anything marked Critical or High deserves a mitigation note before the document is published.
